Nematodes affecting home lawns in Georgia Alfredo Martinez-Espinoza, Extension Pathologist and Clint Waltz, Extension Agronomist			
Nematode	Group	Minimum Threshold	Most Susceptible Turfgrasses
Sting Belonolaimus longicaudatus	ectoparasitic	20	All turfgrasses in Georgia
Ring Criconemella ornata (Mesocriconema spp.)	ectoparasitic	150 - 500	Centipedegrass is particularly sensitive
Awl Dolichodorus heterocephalus	ectoparasitic	25 - 80	Bermudagrass in wet locations
Spiral Helicotylenchus spp.	ectoparasitic	200 - 1,500	All turfgrasses in Georgia
Sheath Hemicycliophora spp.	ectoparasitic	80 - 300	All turfgrasses in Georgia
Stubby-root Paratrichodorus spp.	ectoparasitic	<b>100</b> – 300	All turfgrasses in Georgia; St. Augustinegrass is particularly sensitive
Stunt Tylenchorhynchus spp.	ectoparasitic	1,000	All turfgrasses in Georgia
Cyst Heterodera spp.	endoparasitic	40	St. Augustinegrass is particularly sensitive
Lance Hoplolaimus galeatus	endoparasitic	50 – 80 ( <b>100</b> )	Bermudagrass & St. Augustinegrass
Root-knot Meloidogyne spp.	endoparasitic	<b>80</b> – 300	Bermudagrass, St. Augustinegrass, & zoysiagrass
Lesion Pratylenchus spp.	endoparasitic	150	All turfgrasses in Georgia

\* Minimum threshold levels are in number per 100 cc of soil and may vary depending on source, the levels listed in the UGA "Guide for interpreting Nematode Assay Results" (Extension Circular 834) are listed in bold type. Minimum thresholds are a compilation from various sources and recommendations of other Southeastern U.S. states.

UGA "Guide for interpreting Nematode Assay Results" (Extension Circular 834)
